# TRADERS' GLOSSARY

**At-the-Money (ATM)** — An option whose strike price is nearest the current price of the underlying deliverable.

**Average Directional Movement Index (ADX)** — Indicator developed by J. Welles Wilder to measure market trend intensity.

**Average True Range** — A moving average of the true range.

**Backtesting** — A strategy is tested or optimized on historical data and then the strategy is applied to new data to see if the results are consistent.

**Bid and Ask** — Highest price and lowest price an investor will pay for a tradable.

**Black-Scholes Option Pricing Model** — A model developed to estimate the market value of option contracts.

**Breakout** — The point when the market price moves out of the trend channel.

**Brownian Motion** — Named for English botanist Robert Brown.

**Call Option** — A contract that gives the buyer of the option the right but not the obligation to take delivery of the underlying security at a specific price within a certain time.

**Euro** — European unit of currency, of the European Union.

**Exchange-Traded Funds (ETFs)** — Collections of stocks that are bought and sold as a package on an exchange, principally the American Stock Exchange (AMEX).

**Fade** — Selling a rising price or buying a falling price. A trader fading an up opening would be short, for example.

**In-the-Money (ITM)** — A call option whose strike price is lower than the stock or future's price, or a put option whose strike price is higher than the underlying stock or future's price.

**Long** — Establishing ownership of the responsibilities of a buyer of a tradable; holding securities in anticipation of a price increase in that security.

**Moving Average** — A mathematical procedure to smooth or eliminate the fluctuations in data and to assist in determining when to buy and sell.

**Moving Average Crossovers** — The point where the various moving average lines intersect each other or the price line on a moving average price bar chart.

**Moving Average Convergence/ Divergence (MACD)** — The crossing of two exponentially smoothed moving averages that are plotted above and below a zero line.

**Near-the-Money** — An option with a strike price close to the current price of the underlying tradable.

**Out-of-the-Money (OTM)** — A call option whose exercise (strike) price is above the current market price of the underlying security or futures contract.

**Pairs Trading** — Taking a long position and a short position on two stocks in the same sector, creating a hedge.

**Pin Risk** — A risk that an option or futures

contract faces when the price of the underlying asset closes at or near the exercise price of the contract upon expiration.

**Put Option** — A contract to sell a specified amount of a stock or commodity at an agreed time at the stated exercise price.

**Relative Strength Index (RSI)** — An indicator invented by J. Welles Wilder and used to ascertain overbought/oversold and divergent situations.

**S&P Emini** — Electronically traded, smaller-sized (\$50 times the S&P 500) contracts of the Standard & Poor's 500.

**Stochastics Oscillator** — An overbought/oversold indicator that compares today's price to a preset window of high and low prices. These data are then transformed into a range between zero and 100 and then smoothed.

**Straddle** — The purchase or sale of an equivalent number of puts and calls on an underlying stock with the same exercise price and expiration date.

**Strangle** — The purchase or sale of an equivalent number of puts and calls on an underlying stock with the same expiration date but a different exercise price.

**Volatility Index** — A widely used measure of market risk. Sometimes referred to as the "investor fear gauge."
